

WHEN TO SCREEN?

Screening is recommended for all patients with the following conditions:

Family History

Structural Heart

Other Risk

Screening Heart Disease and Stroke Risk in the

- All patients
- All patients with a family history of heart disease
- All patients with structural heart disease
- All patients with other risk factors

Screening is recommended for all patients with the following conditions:

Family History

- Family history of heart disease
- Family history of stroke
- Family history of heart failure
- Family history of aortic aneurysm
- Family history of aortic dissection
- Family history of sudden cardiac death

Structural Heart

Other Risk

SCREENING HEART DISEASE IDENTIFICATION AND MANAGEMENT FOR PATIENTS WITH RISK FACTORS

- All patients
- All patients with a family history of heart disease
- All patients with structural heart disease
- All patients with other risk factors

Screening is recommended for all patients with the following conditions:

STAGE 1 STABLE HEART ATTACK

STABLE HEART ATTACK
The heart's blood supply is partially blocked, but the heart is still able to pump blood to the rest of the body.

STABLE HEART ATTACK
The heart's blood supply is partially blocked, but the heart is still able to pump blood to the rest of the body.

STABLE HEART ATTACK
The heart's blood supply is partially blocked, but the heart is still able to pump blood to the rest of the body.

STABLE HEART ATTACK
The heart's blood supply is partially blocked, but the heart is still able to pump blood to the rest of the body.

STABLE HEART ATTACK
The heart's blood supply is partially blocked, but the heart is still able to pump blood to the rest of the body.

STABLE HEART ATTACK
The heart's blood supply is partially blocked, but the heart is still able to pump blood to the rest of the body.

STABLE HEART ATTACK
The heart's blood supply is partially blocked, but the heart is still able to pump blood to the rest of the body.

STABLE HEART ATTACK
The heart's blood supply is partially blocked, but the heart is still able to pump blood to the rest of the body.

STABLE HEART ATTACK
The heart's blood supply is partially blocked, but the heart is still able to pump blood to the rest of the body.

STABLE HEART ATTACK
The heart's blood supply is partially blocked, but the heart is still able to pump blood to the rest of the body.

STABLE HEART ATTACK
The heart's blood supply is partially blocked, but the heart is still able to pump blood to the rest of the body.

STABLE HEART ATTACK
The heart's blood supply is partially blocked, but the heart is still able to pump blood to the rest of the body.

STABLE HEART ATTACK
The heart's blood supply is partially blocked, but the heart is still able to pump blood to the rest of the body.

STABLE HEART ATTACK
The heart's blood supply is partially blocked, but the heart is still able to pump blood to the rest of the body.

STABLE HEART ATTACK
The heart's blood supply is partially blocked, but the heart is still able to pump blood to the rest of the body.

STAGE 2 ACUTE CORONARY SYNDROME

ACUTE CORONARY SYNDROME
The heart's blood supply is completely blocked, and the heart is unable to pump blood to the rest of the body.

ACUTE CORONARY SYNDROME
The heart's blood supply is completely blocked, and the heart is unable to pump blood to the rest of the body.

ACUTE CORONARY SYNDROME
The heart's blood supply is completely blocked, and the heart is unable to pump blood to the rest of the body.

ACUTE CORONARY SYNDROME
The heart's blood supply is completely blocked, and the heart is unable to pump blood to the rest of the body.

ACUTE CORONARY SYNDROME
The heart's blood supply is completely blocked, and the heart is unable to pump blood to the rest of the body.

ACUTE CORONARY SYNDROME
The heart's blood supply is completely blocked, and the heart is unable to pump blood to the rest of the body.

ACUTE CORONARY SYNDROME
The heart's blood supply is completely blocked, and the heart is unable to pump blood to the rest of the body.

ACUTE CORONARY SYNDROME
The heart's blood supply is completely blocked, and the heart is unable to pump blood to the rest of the body.

ACUTE CORONARY SYNDROME
The heart's blood supply is completely blocked, and the heart is unable to pump blood to the rest of the body.

ACUTE CORONARY SYNDROME
The heart's blood supply is completely blocked, and the heart is unable to pump blood to the rest of the body.

ACUTE CORONARY SYNDROME
The heart's blood supply is completely blocked, and the heart is unable to pump blood to the rest of the body.

ACUTE CORONARY SYNDROME
The heart's blood supply is completely blocked, and the heart is unable to pump blood to the rest of the body.

ACUTE CORONARY SYNDROME
The heart's blood supply is completely blocked, and the heart is unable to pump blood to the rest of the body.

ACUTE CORONARY SYNDROME
The heart's blood supply is completely blocked, and the heart is unable to pump blood to the rest of the body.

ACUTE CORONARY SYNDROME
The heart's blood supply is completely blocked, and the heart is unable to pump blood to the rest of the body.

CRITERIA FOR STAGE 1

- Chest pain or discomfort that lasts for more than 20 minutes
- Pain that spreads to other parts of the body, such as the arm, back, neck, jaw, or stomach
- Shortness of breath, sweating, nausea, or lightheadedness
- Rapid or irregular heartbeat
- Dizziness or fainting

STAGE 1
HEART ATTACKS ARE CAUSED BY A CORONARY ARTERY BLOCKAGE

STAGE 2
HEART ATTACKS ARE CAUSED BY A CORONARY ARTERY BLOCKAGE
